Consult your dealer to determine the pit system configuration that works best for your application.

BPS Series

Biological Pit Enhancement System

The Biological Enhancement System consists of:

- 2 aeration pumps - linear pumps used to infuse air into water collection pits
- 2 peristaltic pumps - used to inject bacteria and nutrients if so desired

Features:

115V single phase setting | Internal timers allow end user to control the amount and frequency of the liquid microbes and nutrient doses. The BPS Series can be set to inject bacteria every minute, every hour or every day, whatever the situation dictates.

Aeration stick

Shown with side panel removed and liquid microbes, AW-0058-0020, not included

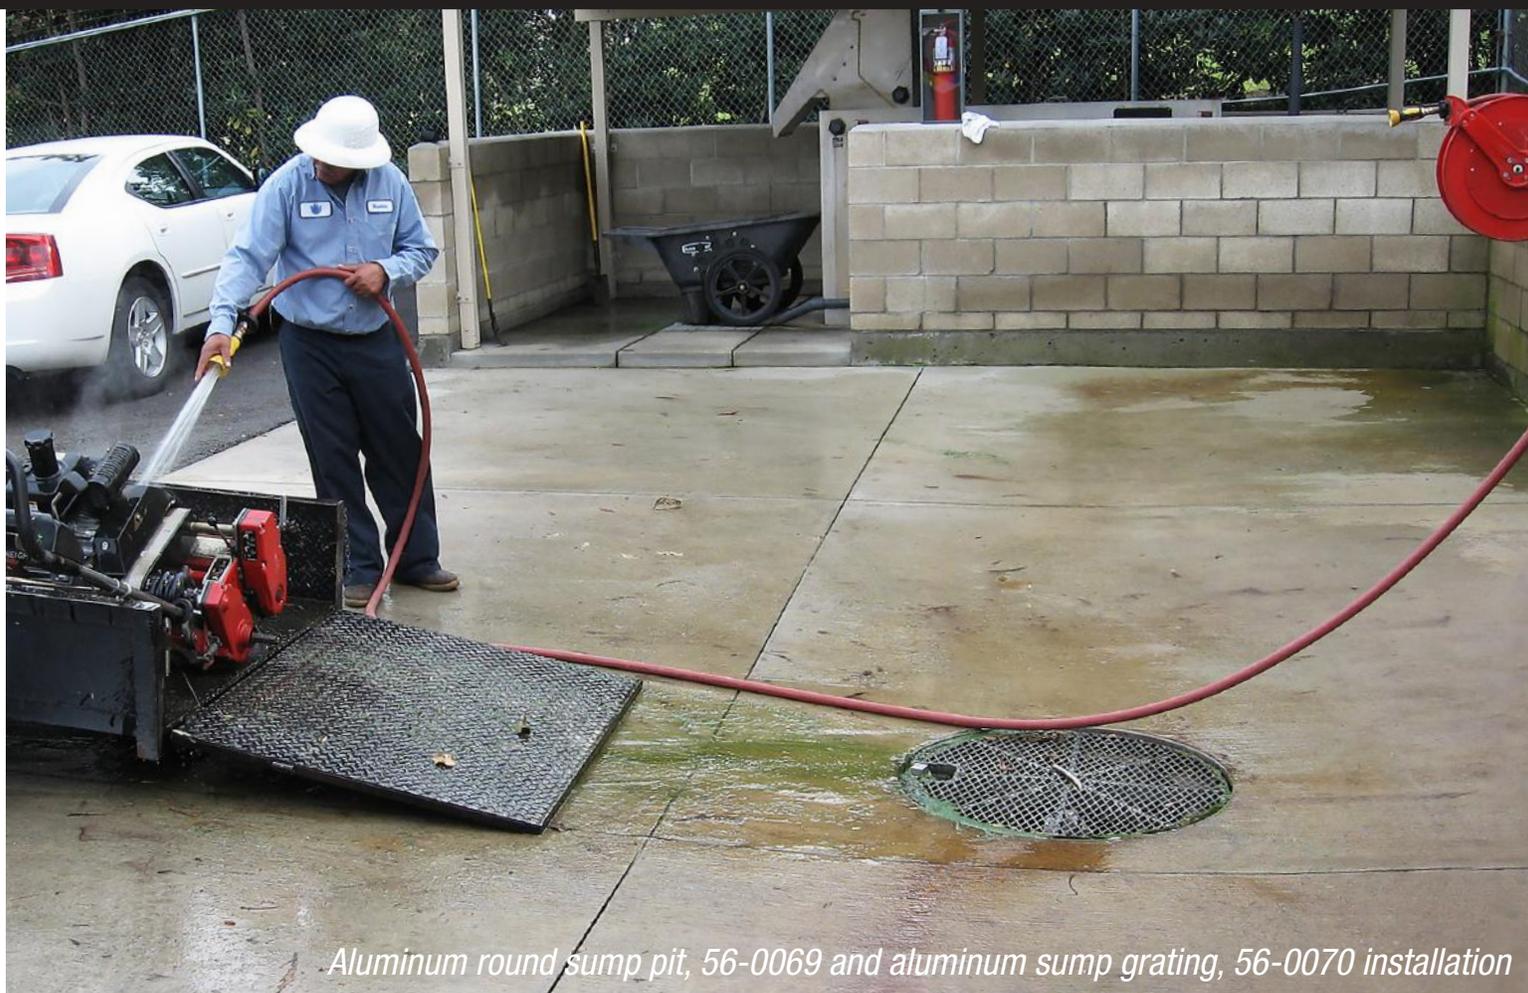

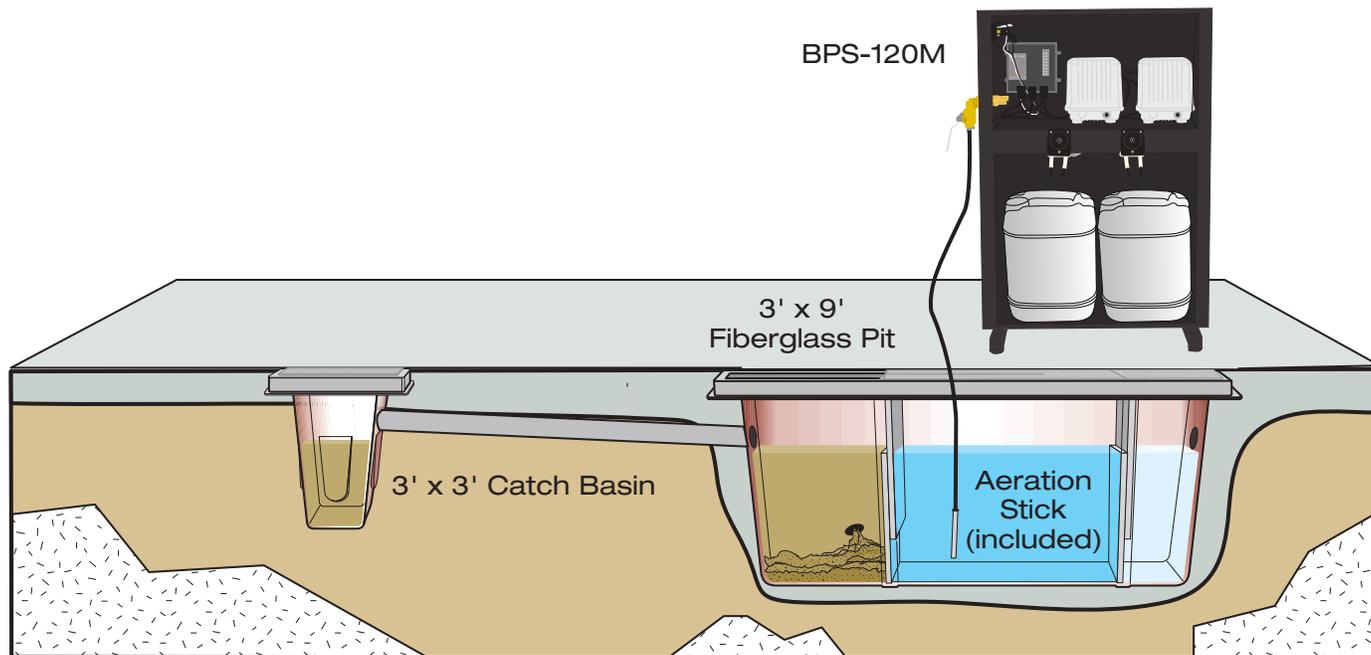

The Biological Pit Enhancement System enables you to inject microbes and nutrients into water stored in pits where oil collects. The BPS Series will improve the quality of the water by decreasing the amount of oils while adding oxygen.
